Mechanical Production Engineering MS4092

Number of problems: 8
Start at: 09.04 PM
Finish at: 09.20 PM
Duration: 16 minutes

The most appropriate machine to manufacture this workpiece is

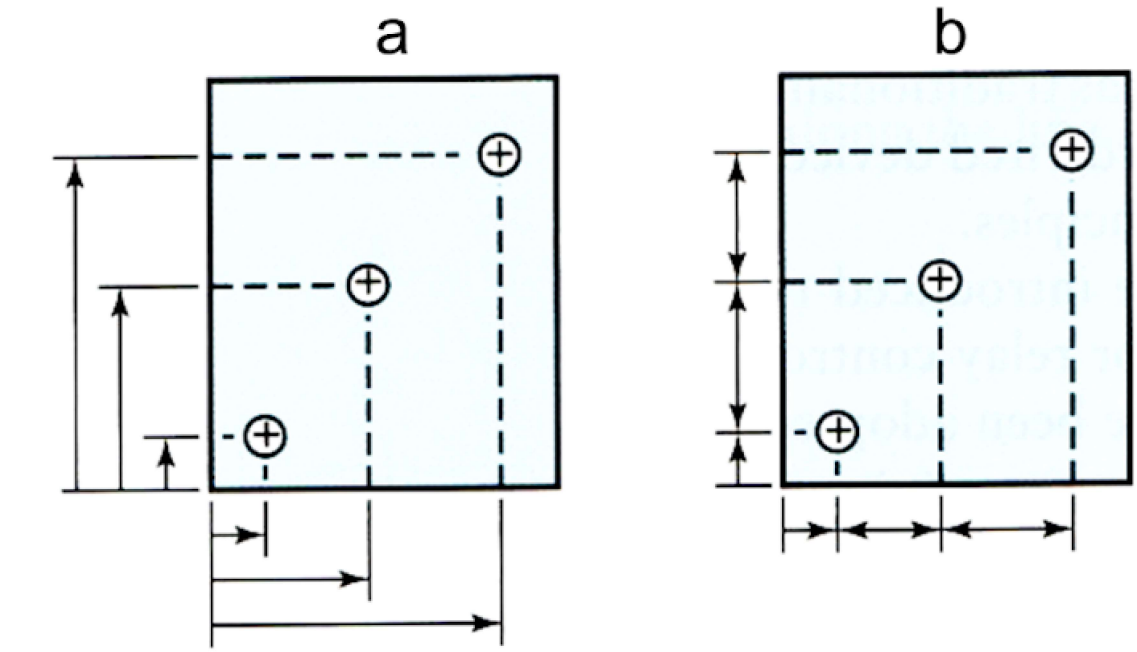

- ○ Milling machine
- ○ Broaching machine
- ⊗ Shaping machine
- ○ Lathe machine

A technician uses a 14-years-old-triobor to measure a hole with more than 60 mm depth resulting in high error results. If you are a quality engineer, which parameter do you think is the root cause of the problem?

- ○ Indirect measurement need to be conducted to know the problem
- ○ Triobor is too old eventhough it is well maintained for 14 years
- ○ Measurement setup doesnt have enough jig to maintain triobor position
- ○ Triobor is not the best measurement device for hole of that size

Which of the following statements about these two figures is true

- ○ Figure A and B will be manufactured using the same referencing methods
- ○ There is no difference about these two figures
- ○ Dimensioning of Figure A is wrong since the hole position should refer to the previous hole
- ⊗ Figure A is called absolute dimensioning and Figure B is called incremental dimensioning

How do you check the quality of a measurement instrument?

- ○ Measure a part with known dimension
- ⊗ Measure a feature on a part several times and ensure the variation of the results are within a desired level
- ○ Judge by using a statement from the standard about the instrument
- ○ Measure a feature and then compare the results with previous data using the same instrument

In order to achieve high precision, a micrometer is designed with the following considerations, except

- ○ Having a ratchet mechanism
- ○ Great surface finish
- ○ A limited size of tip, anvil, and spindle
- ⊗ A maximum measurement capacity of 25 mm

A seamless pipe can be manufactured using

- ○ Extrusion
- ○ Forging
- ⊗ Rolling
- ○ Drawing

Why does additive manufacturing play a key role in the industry 4.0?

- ○ Its capability of good prototyping methods
- ○ Additive manufacturing could fabricate any form of product
- ○ Its capability of doing a job-manufacturing
- ⊗ Additive manufacturing is a manufacturing method that needs a low number of operators

What process is used to manufacture a plastic bottle?

- ○ Extrusion
- ⊗ Blow molding
- ○ Rotational molding
- ○ Injection molding
